

One-third of Summer is Gone already!

Interior, Conservatory of Mrs. T. Eaton, Oakville, Ont.

ISN'T it deplorable the way Summer seems to melt away? If only some of the long, grey, wearisome Winter days would vanish as quickly as these glorious, carefree summer ones do... but no such luck.

Summer loves to be encouraged... build a permanent guest room for her in your home... a small conservatory.

Capture the spirit of these sunny colourful days... their fragrance... their healthfulness to stand you in good stead when your body begins to weaken 'neath the onslaught of Winter.

To have a small conservatory is the very essence of common sense. The cost is nothing when you divide it by the years and years of pleasure and physical benefit.

Time passes fast. Now is the hour to plan... to build. Talk over the matter with us; or write us for further information. Either course obligates you not one jot or one tittle.

We highly recommend

the use of a special glass which will promote free passage of the ultra violet rays into your home. They would be of priceless benefit during winter days... especially if you have a delicate person in the house. Ask our Toronto Office for Vitalarium Literature; also for a copy of "What is So Rare as a Day in June?"

The charming conservatory shown below is that of Mrs. Wm. Cornell, Toronto.
