The way to build strong healthy children

We are pleased to announce that we are in a position to supply the famous VIORAY health-giving Glass, the clear vision window glass which permits the passage of the ultra violet rays.

Every home should have at least one room glazed with this wonderful window glass. It should be the nursery or playroom, where the children can play in the comfort of the house and bathe in sunshine, receiving the body building benefits of the ultra violet rays.

The ultra violet rays are the health-giving rays of the sun. The profound benefit of the absorption of these rays by the skin is now fully recognized. Exposure to them builds up

strong, healthy children and rapidly speeds the recovery of the convalescent. The ultra violet rays speed the healing of wounds and in children prevent the development of rickets and increase resistance to infection.

Glaze the nursery, sunroom or playroom with VIORAY health-giving Glass and your children can play in the sunshine of the outdoors all year round.
